DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 10-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tam et al., 6,969,553 B1 (Tam) or PCT Publication WO 01/73173 (the publication).

Tam and the publication each teach high strength gel-spun polyethylene multifilament yarns. Tam and the publication teach that their multifilaments have a Raman factor, orthorhombic crystal and monoclinic crystal components and melting points similar to applicants as required by claims 10-12 and 18. See both documents in their entirety. It would have been obvious to one having ordinary skill in the art to modify and adjust these properties during routine experimentation for optimization purposes. Regarding claims 13-17, it would have been obvious to the skilled artisan to adjust these properties commensurate with the desired properties of the end product.

Therefore the teachings of Tam and the publication would have rendered obvious the invention as claimed in present claims 10-18.

No claims are allowed.
